

TAKING YOUR PILLS

DAY 1

Start with the mifepristone pill.

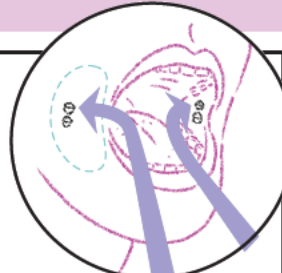

Swallow the pill.

DAY 2-3

Take the misoprostol pills, following the instructions of your healthcare provider.

Place 2 misoprostol pills in between your cheek and gum on each side of your mouth (4 pills total).

Wait 30 minutes, then swallow what's left of the pills.

For pain or cramps, take the medicines recommended by your provider.

If your health care provider told you to take another dose of misoprostol, follow their instructions:

Your health care provider may recommend another medicine.

Take _____ ,
_____ pills every _____ hours

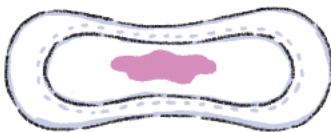

If you need birth control:

It's possible to get pregnant within 2 weeks of a medical abortion. If you need birth control, your health care provider can help you decide which method may be best for you.

IN THE FOLLOWING WEEKS

Expect to experience vaginal bleeding or spotting for an average of 9-16 days.

Cramps should go away.

Follow up with your health care provider approximately 7-14 days after the first pill.

This is not all the important safety information associated with the use of mifepristone and misoprostol. Please see the additional **MEDICATION GUIDE** and the **FULL PRESCRIBING INFORMATION**.
